

Healthy Neighborhoods Study

Who's moving where in gentrifying communities?

Documenting the invisible train

HNS Resident Researchers knew

that when economically disadvantaged people moved from their rapidly gentrifying neighborhoods, they were pushed outward to a predictable set of communities.

Big Data

We used credit data to map out where people moved to and from, and learn about differences between groups of movers.

Findings

Moving patterns detected by the big data analysis aligned with Resident Researcher predictions.

Takeaway

Displacement is a regional problem requiring regional solutions, created by planners and residents working together.
